This exciting chronological introduction to child development employs the lauded active learning approach of Laura E. Levine and Joyce Munsch’s successful topical text, inviting students to forge a personal connection to the latest topics shaping the field, including neuroscience, diversity, culture, play, and media. Using innovative pedagogy, Child Development From Infancy to Adolescence: An Active Learning Approach reveals a wide range of real-world applications for research and theory, creating an engaging learning experience that equips students with tools they can use long after the class ends. A comprehensive, in-depth exploration of the processes and issues involved in planning for children in Australian early childhood settings, with emphasis on the importance of the individual child. The Spahr and Saville families of Ohio. A superbly-detailed presentation offering a wealth of practical guidance. Encompasses epidemiology, incidence, cause, pathology, diagnostic procedures, therapy, and clinical features for the entire spectrum of childhood neoplasms. Helps the reader in diagnosing malignancy; recognizing and treating life-threatening complications; and in tailoring therapy to the individual based on age, tumor histology, stage of disease, and a variety of other prognostic features. The amount of information currently available on pediatric epilepsy, as with all burgeoning fields, can seem overwhelming. Pediatric Epilepsy Case Studies: From Infancy and Childhood through Adolescence reviews the recent flood of new information on the pathophysiology, genetics, and treatment of the various epilepsy syndromes and distills it into an easy-to-use guide. Edited by respected and well-known leaders in the field, the book provides brief, but thorough, descriptions of the different syndromes commonly encountered in clinical practice across the pediatric range. Grasping the complexity and nuances associated with various epileptic syndromes can be daunting. Therefore, the book begins with an introduction to the fundamentals of epilepsy. Subsequent sections include succinct case
presentations and clinically relevant discussions of the more common epilepsy syndromes affecting each age group. The chapter authors describe why they chose each particular case, what they learned, and how it changed their practice. The extensive resource section provides an authoritative guide to relevant findings scattered in the literature. Research in the field of epilepsy will continue at a rapid pace, with the ultimate hope of curing many intractable epilepsy syndromes. Organized chronologically, from neonate through adolescence, this book is the culmination of a group effort involving leading physicians and researchers whose contributions constitute a concise and practical reference for health professionals in training.

The second edition, now in two volumes rather than one, contains some 30 new chapters addressing a greatly increased number of topics and range of issues, from a variety of disciplines. The first volume offers discussion of general issues in the theory, assessment, and treatment of developmental disThe ultimate reference book : the 5th updated edition of the famous “blue guide”. Included : A DVD with new sequences completes each chapter! Epileptology changes. The syndromic approach is completed by an etiological approach, based on the major advances in genetics and functional genetics. New entities have found their place, and a purely descriptive, “electroclinical” approach is no longer adapted in many circumstances. The 5th edition of the Blue Guide includes the most recent advances. It was necessary to justify the physiological, epidemiologic, genetic and therapeutic approaches and to consider them in the light of the new classification efforts, which are still in the making. Nevertheless, the description of epileptic syndromes, both classical and recent,
remains at the core of this book. Now in full color, this comprehensive Eighth Edition nursing text continues to meet the needs of practical/vocational nursing curriculum as one coherent source. Broad coverage includes anatomy and physiology; nursing process, growth and development; nursing skills; and, pharmacology. A solid foundation is also provided for medical-surgical, maternity, pediatric, and psychiatric-mental health nursing. Step-by-step procedures are formatted in two-column presentation with rationale and numerous illustrations to show clearly all aspects of nursing procedures. Appendixes provide English-Spanish healthcare phrases, key abbreviations and acronyms, and more. Other new features include a section on study skills and home health care mentioned throughout the text. Now with three multimedia CD-ROMs: an audio pronunciation CD-ROM; a clinical simulation of wound care of the diabetic patient; a bonus CD-ROM containing a simulated NCLEX-PN exam; a clinical simulation on whistleblowing; a full video on treatment of pressure ulcers; and six animations: cell cycle, congestive heart failure, hypertension, immune response, nerve synapse, and stroke. This authoritative, engaging work examines the key role of relationships in child and adolescent development, from the earliest infant-caregiver transactions to peer interactions, friendships, and romantic partnerships. Sections cover foundational developmental science, the self and relationships, social behaviors, contexts for social development, and risk and resilience. Leading experts thoroughly review their respective areas and highlight the most compelling current issues, methods, and research directions. Pedagogical Features: *Structured to follow the sequence of a typical social development course. *Chapters are brief and can be assigned along with primary source readings. *Includes end-of-chapter suggested reading lists. *Coverage is broader and higher-level than other social development texts. *Designed with the needs of students in mind, in terms of writing style, size, and price. The fourth volume based on the
annual University of Miami symposia on stress and coping, this new addition to the series is the first to focus on developmental and clinical stressors during infancy and childhood. While developmental stressors such as early separation and stranger anxiety, novelty stress, and fear-evoked personal distress, arise during normal development, clinical stressors result from certain conditions that are relatively common in infancy and early childhood such as premature birth and respiratory disease. Various therapies are discussed -- for example, relaxation and massage -- that can alleviate the stress associated with psychiatric conditions in childhood and adolescence, including depression and adjustment disorder. The result is an integration of diverse research and theory on the psychophysiological, developmental, and psychosocial aspects of stress and coping in animals and humans by some of the leading researchers in the field. The MANUAL OF STAFF DEVELOPMENT is a practical resource that provides staff development educators and administrators with a compendium of useful tools and techniques to meet the rapidly changing professional development needs of their staff. Drawn from hospitals through the U.S. and Canada, the materials address such crucial and diverse activities as staff development certification, finance, quality, marketing, instructional design, needs assessment, program planning, orientation, preceptorship, in-service education, competence assessment, and evaluation. This resource enables the staff development educator to benefit from the expertise and experience of numerous staff development experts, saving the time and money required creating these programs and materials. Includes bibliographical references and index. CD Companion contains a variety of activities to enhance learning also included are Nursing Care Plans to build, individualize and print out. This is a re-written edition of a classic work known as The Blue Guide. The first edition of the book appeared in 1985, and was based on a workshop held in Marseille in July 1983. That workshop which had brought
together the Commission on classification and Terminology of the International League Against Epilepsy, and an international group of epilepsy experts, was an important event in the development of an international classification of epilepsies and epileptic syndromes (ICEES)."
